

Generative Artificial Intelligence and Creativity

Can we use generative artificial intelligence in school activities without stifling creativity?

Spark New Ideas: AI can be used as an assistive, collaborative tool to help ākonga start to brainstorm new ideas and projects.

Novel New Lessons: AI can help kaiako with activities, resources, and lesson plans that engage ākonga in subject areas that are of interest to them.

Learn to Use AI Effectively: Direct instruction can help ākonga understand *how* to use AI for creative projects and how to properly acknowledge AI contributions.

Encourage Critical Thinking: Encourage ākonga to be critical of AI outputs. Help them refine their work and make sure finished projects are their own original works.
